

MULTI-LAYERED FOAM

6" Therapeutic Basic Foam Mattress

AME Basic Foam Mattress is designed to aid in pressure ulcer prevention in the home-care setting. It is cut from a single layer of high-quality, combustion-modified foam in a fluid-proof, nylon and vinyl cover. The cross-cut top surface is segmented in three distinct zones. Folded and boxed to save freight and storage. Primarily used in aggressive treatment of pressure ulcers. Weight capacity: 350lbs. This item cannot be returned or exchanged once they are opened due to hygienic reasons.

- Three-tier, zoned design.
- Luxurious, visco-elastic high resiliency “memory” foam in foot section enhances the pressure reducing properties of the Heel Slope feature.
- Firm perimeter bolsters help to provide safe transfers, more stable edge-of-bed sitting, and reduced risk of gaps at siderails.
- Extra-soft, high performance top provides maximum immersion and a premium feel against user’s skin.
- Recommended weight capacity: 400 lbs.
- Luxurious, Visco-elastic high resiliency “memory” foam in foot section enhances the pressure reducing properties of the Heel Shoe feature.
- Firm perimeter bolsters help to provide safe transfers, more stable edge-of-bed sitting, and reduced risk of gaps at siderails.
- Extra-soft, high performance top provides maximum immersion and a premium feel against user’s skin.
- Note This product does not include Heel Slope feature or Geo-Matt surface.

1. **Cover** - The bacteriostatic top fabric is fire resistant, fluidproof, tear resistant, cleanable, and replaceable. The pleated design allows full integration with the mattress’s Geo-Matt style shear-relieving surface while minimizing hammocking
2. **Hidden zipper cover design** - Flapless construction creates no collection points for contaminants. Combines with stain-resistant surface coating to ensure easy, thorough cleaning.
3. **Cut foam top** - Foam topper is a high density, medical grade foam. The unique geometric design consists of over 800 individual cells, each of which acts individually to redistribute pressure, to reduce heat and moisture buildup on the skin, and to reduce shear to underlying tissues.
4. **Multi-tiered core** - Beneath the Geo-Matt top, the core is made of two progressively denser premium foam layers for improved support and longevity.
5. **Heel Protection** - Two distinct features to protect vulnerable heels, the site of roughly one third of all pressure ulcer. Heel slope reduces pressure on heels with a subtle taper design that redistributes pressure onto the more load-tolerant calves.
