

AME700

ALTERNATING PRESSURE MATTRESS REPLACEMENT SYSTEM

AME 700 ALTERNATING PRESSURE MATTRESS

Designed with deep cell air technology, the economical AME700 has 16 nylon-coated, 8-inch-high air cells to immerse and envelop patients for optimal pressure redistribution. Low air loss is provided from each air cell, circulating over 100 liters of air per minute to reduce heat and moisture to help manage the patient microclimate. The AME700 also features a foam base for additional protection during power outages and is covered with a quilted Plexus nylon top cover that helps reduce shear.

Key Product Features

- Alternating pressure mattress replacement system
- 20 nylon-coated, 8" high air cells provide full immersion and envelope the patient
- Waterproof, breathable high quality nylon top cover reduces friction and shear
- Simple comfort and weight adjustment dial
- Energy efficient, quiet control unit cycles air every 5-10 minutes between A/B Cells
- Continuous monitoring of incorrect pressures are indicated by a low pressure alarm
- 2" foam base adds safety and comfort
- CPR quick release for rapid deflation
- Optional raised safety perimeter with egress openings for fall prevention
