

LOW BED 900 PRIME

LOW BED 900 PRIME

Expands into a 42" 500 lb. capacity bariatric bed! Every day presents a new challenge in caring for residents. At a time when safe working environments, quality of care, and cost consciousness are at a premium, your equipment needs to rise to the occasion and that's where we come in!

The Low Bed 900 Prime bed can handle your non-traditional bariatric patient; a person who needs a little more elbow room for comfort and dignity. An additional benefit is a more workable surface for repositioning and care by staff and faculty.

Boasting a 500 lb. weight capacity and the ability to expand from 35" to 42" wide and 76" to 84" in length, the High/Lo Bed can meet and exceed the rigorous challenges of resident care in today's industry.

AME strives to develop and produce a complete product focusing on reducing cost and maintaining a "Best in Class" standing. This can be surmised in one word - Quality.
