

# I-SERIES CONVERTIBLE®

Safe Patient Handling Solutions

## COMFORT & FREEDOM

Mobility is fundamental to the health of over one million nonambulatory people living in the U.S. today.

Moving and positioning a dependent patient can be challenging. Performing these tasks on the average-size person can be difficult and unsafe for both patient and caregiver. With heavier patients, the task can be an even greater challenge.

That's why Barton Medical Corporation developed our Convertible I-Series Chairs. Patients and caregivers appreciate the freedom of mobility and enjoy the comfort of easily adjusted positioning without unnecessary fear of injury.

### LIGHT WEIGHT

So easy to turn and maneuver

### REDUCES RISK

Helps to reduce risk of injuries

### MINIMIZES PAIN

Minimize pressure ulcers and sores

The Barton I-Series Convertible Chairs convert from an upright position to a reclined, stretcher position with an infinite number of positions in between.

This innovative, multi-positional chair helps provide a no-lift solution for patient transfers in a safe, dignified manner.

## UNIQUE CAPABILITIES

“We love the chair. It is easy for caregivers to use and transfer patients to them. We can make patients comfortable in this chair. The ability to position the chair at an angle prevents patient from moving forward and falling. It's extremely helpful and increases our safety. I haven't seen any other chair that can do all this.”

Yosely Cruz BSN, RN, Clinical Manager Neuro ICU  
Providence Hospital - St. John's Health System

Safe Patient Handling Solutions

I-700  
with Positioning Transfer System (PTS™)

## SEE HOW EASY?

## THE SUPPORT YOU NEED

Our Convertible Chairs used in conjunction with our unique, patented Positioning and Transfer System™ sets the standard in “no-lift” lateral patient transfers.

The PTS™ provides a safe, comfortable method for moving or positioning non- and limited- ambulatory patients.

Tested, utilized and proven highly effective in homes and hospitals across the nation, this innovative equipment significantly reduces the risk of injury for patients and caregivers.

Just say NO to traditional lifting methods because we've got your back.
